(54) DEWATERING DEVICE FOR UMBRELLA

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a dewatering device for an umbrella capable of dewatering the wet umbrella sufficiently by a simple constitution having an easily replaceable dewatering member, and enabling a person to discriminate the dewatering degree of the wet umbrella, and capable of being used in the state of being installed for displaying an advertisement when the device is not in use.

SOLUTION: In a main body 11 of the umbrella dewatering device 10, an umbrella passage 12 is constituted so as to allow the umbrella to move from one end 12a to the other end 12b. First dewatering rotating bodies 20 are disposed alternately on both sides of the passage from the one end to the other end in such a manner as to be rotatively driven about an approximately vertical axis. The rotating body 20 comprises a rotation shaft 21 rotatively supported on the main body, and the blade-like dewatering members 22, 23 provided around the shaft along an almost whole height to extend radially. The first dewatering rotating body on each side of the umbrella passage is driven to rotate.
